

What Makes BabyDance™ the Best Choice in a Fertility Lubricant?

BabyDance™

FDA Cleared

BabyDance is cleared by the FDA as a fertility lubricant, which requires extra testing to verify that it won't harm sperm, eggs or embryos.

Made Without Parabens

Parabens are endocrine disruptors that have been linked to cancer, reproductive toxicity, immunotoxicity, neurotoxicity, and skin irritation. BabyDance is the first FDA-cleared fertility lubricant made without parabens.

Isotonic

BabyDance is salt-balanced to vaginal tissues and won't cause water to move into or out of vaginal cells. Many commercially available lubricants are hypertonic, and can dehydrate cells.

Glycerol/Glycerine-Free

Glycerol-containing lubricants have been shown to have a chemical toxic effect on sperm, resulting in decreased embryo development after fertilization.

Made in the USA

BabyDance is manufactured in the USA in an ISO 13485 and GMP-certified facility.

Based on Leading Edge Science

BabyDance relies on breakthrough science about how the reproductive ecosystem works. So much has been learned since KY Jelly was invented in 1904!

Natural Raspberry & Clary Sage Antioxidants

BabyDance contains botanical raspberry humectants and clary sage for replenishing moisture.

Easy to Use and Convenient

MyDose™ Single Use Tube and Applicator is a unique application system that allows you to choose the desired amount of product to moisturize and helps you get it in the right spot.
